Shivalika Karan Bora

Cardiff, UK | +44 7887137418 | 123.shivalika@gmail.com | linkedin.com/in/shivalika31 | github.com/shivalika3101 | shivalika-karan-bora.vercel.app

Profile

MSc Data Science and Analytics student at Cardiff University (graduating May 2027, available full time from August 2027) with 2+ years of software engineering experience at Tata Consultancy Services. I build machine learning models and data pipelines, from forecasting energy use across 20M+ records to putting models into working web apps. Strong in Python, SQL and APIs, with experience delivering reliable data systems for a national-scale government service.

Education

MSc Data Science and Analytics, Cardiff University | Jan 2026 – May 2027 (expected)

Relevant modules: Applied Machine Learning, Data Visualisation, Foundations of Statistics and Data Science, Computational Data Science, Foundations of Operational Research and Analytics, Team Project.

Team projects in machine learning, time-series forecasting and full-stack data applications. Learning R through coursework.

MBA (Online, part-time), Manipal University Jaipur | May 2025 – May 2027 (expected)

B.Tech in Computer Science and Engineering, SRM Institute of Science and Technology | 2019 – 2023 | CGPA 9.04/10

Professional Experience

Systems Engineer, Tata Consultancy Services | Jul 2023 – Jan 2026

- Built, enhanced and maintained 150+ REST APIs and data integration services for a national government system used across India.
- Wrote SQL (MySQL) queries, data validation rules and batch processing jobs to keep high-volume data accurate and ready for reporting.
- Automated MIS reporting and batch workflows, cutting manual effort by 40%.
- Implemented Redis caching to improve the speed and reliability of high-traffic services.

- Tested features, resolved production issues and supported releases in an Agile team. Recognised with 4 performance awards.

Technical Intern, Tata Power-DDL | 2022 | Built a Python image analysis application (filtering, edge detection, histograms) and supported system troubleshooting.

Software Development Intern, HighRadius | 2021 | Contributed to a full-stack web project across frontend and backend in an Agile team.

Projects

Building Energy Prediction (ASHRAE) | Python, Pandas, LightGBM, XGBoost, CatBoost | Team of six

- Cleaned and merged 20M+ hourly meter readings from about 1,450 buildings with building and weather data, engineering lag, rolling-window and calendar features.
- Built and tuned the LightGBM model with RandomizedSearchCV (RMSLE 0.509). The team's CatBoost + LightGBM ensemble reached RMSLE about 0.50, over 60% lower error than the median baseline.

WasteWise AI | React, FastAPI, PostgreSQL, Docker | Team project

- Built the React frontend, login flow, protected image-classification API, prediction history and bin feedback for an app that sorts household waste into 30 categories.
- Integrated a four-model CNN ensemble (MobileNetV2, EfficientNet-B0, ResNet50, DenseNet121) into the production endpoint, storing results in PostgreSQL.

AI Jobs Market Dashboard | Python, Pandas, Streamlit, Plotly | Solo project | Live demo

- Built an interactive dashboard on 15,000 AI job postings (Kaggle, 2024–25) with KPIs (median salary, remote share, countries), filters, six chart types and auto-generated insights on AI hiring trends.

Technical Skills

- **Programming and data:** Python, SQL, Pandas, NumPy, R (learning), Java, Streamlit, Plotly
- **Machine learning:** scikit-learn, LightGBM, XGBoost, CatBoost, time-series forecasting, model evaluation
- **Data engineering:** data pipelines, ETL, data validation, data quality, batch processing
- **Databases:** MySQL, PostgreSQL, Redis
- **Engineering:** REST APIs, FastAPI, Spring Boot, React, Docker, Git/GitLab, Agile
